## **DETAILED ACTION**

### ***Allowable Subject Matter***

1. Claims 1, 6, 7, 9, 10, 13, 15, 19-21, 23-25 and 27 are allowed.
2. The following is an examiner's statement of reasons for allowance:

The prior art of record fails to teach a receiver comprising a signal receiving device providing K reception signals, a signal pre-processing circuit comprising K A/D converters for sampling the K reception signals, a multiplexer for multiplexing the K digital signals as recited in claims 1 and 15, or a stage having K digital zero-inserting elements connected in parallel, each inserting K-1 zeros per sampling value of the K digital signals as recited in claim 19, and further including a digital filter device for filtering the multiplexer output or the K digital signals with inserted zeros, where the digital filter includes memory elements formed by shift registers of length K, the filter device including a plurality of single digital filters, and sampling rate reduction circuits configured in series in an alternating fashion.

The prior art of record also fails to teach a receiver comprising a signal receiving device providing K reception signals, a signal pre-processing circuit comprising K A/D converters for sampling the K reception signals, a stage having K digital zero-inserting elements connected in parallel, each inserting K-1 zeros per sampling value of the K digital signals, and a digital filter device for filtering the K digital signals with inserted zeros, where the digital filter has K inputs and a k-th input is connected to a series of a number of k-1 leading memory elements followed by a number of memory elements formed by shift registers of a length of K memory locations, as recited in claim 27.
